PROFESSIONAL SUMMARY

AI Product Engineer at Induce AI, an AI filmmaking startup, building LLM-powered features and agentic pipelines that turn plain-language ideas into storyboards and production-ready prompts for image and video generation. Hands-on with Python, LangGraph, OpenAI and Anthropic APIs and core ML libraries (PyTorch, scikit-learn, pandas), plus FastAPI and React for taking features from prototype through testing to deployment. Pairs an engineering foundation (B.Tech, ECE) with a product mindset focused on output quality, reliability and fast iteration.

EXPERIENCE

AI Product Engineer — Induce AI *(AI filmmaking startup)* March 2026 – Present

- Built and shipped AI-powered product features in Python on OpenAI and Anthropic LLM APIs, owning them from prototype through testing, debugging and deployment.
- Engineered a cinematic AI pipeline that converts short creative briefs into structured, shot-by-shot prompts for image and video generation models, including Veo, Kling, Seedance and Wan.
- Designed multi-step agentic workflows in LangGraph that break complex creative tasks into chained, stateful steps, making outputs easier to control and debug.
- Improved LLM response quality and consistency through systematic prompt engineering: structured output formats, reusable prompt templates and iterative testing on real use cases.
- Partnered with product and engineering teams to scope features, prototype quickly and iterate on feedback.

Electrical Design Engineer Intern — Athul Power Tech Services April 2024 – March 2025

- Designed load banks that discharge batteries under a controlled electrical load, used for battery testing.
- Worked on the electrical circuit design behind these systems, applying ECE fundamentals to hands-on hardware work.

PROJECTS

ShotSense — AI Shot Analyzer for Filmmakers | *shotsense.onrender.com* | *github.com/SuryaPendekatla/shotsense*

- Fine-tuned an ImageNet-pretrained ResNet-18 in PyTorch to classify 7 cinematic shot scales, reaching 57% macro-F1 on a held-out, human-labelled test set, nearly double a scikit-learn HOG + logistic-regression baseline (31%).
- Built a full-stack app that detects cuts in uploaded videos with OpenCV, classifies each shot with the ONNX-exported model and uses an LLM to write structured shot breakdowns and video-generation prompts; FastAPI, PostgreSQL, JWT auth and React, containerised with Docker.

CineFlow AI — Agentic Cinematic Prompt Pipeline | *Python, LangGraph, OpenAI API, Anthropic API*

- Built an end-to-end LangGraph pipeline that turns a one-line idea into a scene-by-scene storyboard and detailed cinematic prompts (shot type, camera movement, lighting, mood) for image and video models.
- Orchestrated OpenAI and Anthropic models across chained stages with structured outputs, so each step passes clean, consistent data to the next.

AI-First Corporate Website Revamp | *React, Vite, Tailwind CSS, Framer Motion*

- Rebuilt a corporate website on a component-driven React + Vite architecture with a reusable UI component library.
- Delivered a fully responsive, animated interface with Framer Motion and optimized page-load performance across devices.

TECHNICAL SKILLS

AI & LLM: LLM Application Development, Prompt Engineering, Agentic Workflows, LangGraph, OpenAI API, Anthropic (Claude) API, Structured Outputs, Vector Databases
Machine Learning & Data: PyTorch, scikit-learn, pandas, NumPy
Generative Video Models: Veo, Kling, Seedance, Wan
Languages: Python, JavaScript, SQL, HTML, CSS
Backend: FastAPI, Flask, REST APIs
Frontend: React.js, Vite, Tailwind CSS, Framer Motion
Automation & Tools: n8n, Git, GitHub, Postman, VS Code, Vercel

EDUCATION

Full Stack Python Development — Codegnan | *7-month professional training program* May 2025 – Dec 2025

B.Tech, Electronics and Communication Engineering — Ponnaiyah Ramajayam Institute of Science and Technology (PRIST) | *CGPA: 7.49 / 10* May 2024

CERTIFICATIONS

- Claude course certifications — Anthropic Academy (Anthropic)
- Prompt Engineering — DeepLearning.AI
