PROFESSIONAL SUMMARY

Python and full-stack developer shipping production features at Induce AI, an AI filmmaking startup. Builds backends with FastAPI and Flask, responsive frontends with React, Vite and Tailwind CSS, and integrates LLM APIs (OpenAI, Anthropic) into real products. Trained through a 7-month Full Stack Python Development program at Codegnan, with a B.Tech in Electronics and Communication Engineering.

EXPERIENCE

AI Product Engineer — Induce AI *(AI filmmaking startup)* March 2026 – Present

- Built and shipped product features in Python, owning them from prototype through testing, debugging and deployment.
- Integrated OpenAI and Anthropic LLM APIs into a pipeline that converts creative briefs into structured, shot-by-shot prompts for video generation models, including Veo, Kling, Seedance and Wan.
- Designed multi-step workflows in LangGraph that break complex tasks into chained, stateful steps, making them easier to control and debug.
- Improved output consistency with structured output formats, reusable prompt templates and iterative testing on real use cases.
- Partnered with product and engineering teams to scope features, prototype quickly and iterate on feedback.

Electrical Design Engineer Intern — Athul Power Tech Services April 2024 – March 2025

- Designed load banks that discharge batteries under a controlled electrical load, used for battery testing.
- Worked on the electrical circuit design behind these systems, applying ECE fundamentals to hands-on hardware work.

PROJECTS

ShotSense — AI Shot Analyzer for Filmmakers | *shotsense.onrender.com* | *github.com/SuryaPendekatla/shotsense*

- Built a full-stack app that detects cuts in uploaded videos with OpenCV, classifies each shot and uses an LLM to write structured shot breakdowns and video-generation prompts; FastAPI REST API, PostgreSQL, JWT auth and a React + Tailwind frontend, containerised with Docker with CI on GitHub Actions.
- Fine-tuned a ResNet-18 shot-scale classifier in PyTorch, reaching 57% macro-F1 on human-labelled test frames (vs. 31% for a scikit-learn baseline), and served it through ONNX Runtime for fast CPU inference.

AI-First Corporate Website Revamp | *React, Vite, Tailwind CSS, Framer Motion*

- Rebuilt a corporate website on a component-driven React + Vite architecture with a reusable UI component library.
- Delivered a fully responsive, animated interface with Framer Motion and optimized page-load performance across devices.

CineFlow AI — Agentic Cinematic Prompt Pipeline | *Python, LangGraph, OpenAI API, Anthropic API*

- Built an end-to-end Python pipeline that turns a one-line idea into a scene-by-scene storyboard and detailed cinematic prompts for image and video models.
- Orchestrated OpenAI and Anthropic models across chained LangGraph stages with structured outputs, so each step passes clean, consistent data to the next.

TECHNICAL SKILLS

Languages: Python, JavaScript, SQL, HTML, CSS
Backend: FastAPI, Flask, Django, REST APIs
Frontend: React.js, Vite, Tailwind CSS, Framer Motion
AI Integration: OpenAI API, Anthropic (Claude) API, LangGraph, Prompt Engineering
Data & ML: pandas, NumPy, scikit-learn, PyTorch
Tools & Deployment: Git, GitHub, Postman, VS Code, Vercel, n8n

EDUCATION

Full Stack Python Development — Codegnan | *7-month professional training program* May 2025 – Dec 2025

B.Tech, Electronics and Communication Engineering — Ponnaiyah Ramajayam Institute of Science and Technology (PRIST) | *CGPA: 7.49 / 10* May 2024

CERTIFICATIONS

- Claude course certifications — Anthropic Academy (Anthropic)
- Prompt Engineering — DeepLearning.AI
